DETAILED ACTION

In view of the appeal brief filed on October 14, 2008, PROSECUTION IS HEREBY REOPENED. New grounds of rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 11 and 13-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which

Art Unit: 1651

was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Specifically, the claims require that the microporous membrane body contain functional groups chemically coupled to at least one protease inhibitor that is capable of selectively binding a protease selected from four types of proteases. However, the specification fails to describe the chemistry necessary to bind any and all of these protease inhibitors to the functional groups of the membrane body. The protease inhibitors encompassed by the claims do not have chemical structures that are sufficiently similar to have comparable interactions with any and all types of functional groups present on a variety of membranes. The applicant has not demonstrated that the protease inhibitors have similar binding properties based on close structural and chemical similarity. See *Dillon*, 919 F.2d at 692-93, 16 USPQ2d at 1900-02, where a claimed tetra-orthoester fuel composition was held to be obvious in light of a prior art tri-orthoester fuel composition based on their structural and chemical similarity and similar use as fuel additives. The two examples in the specification are limited to only describing the binding of two protease inhibitors, p-aminobenzamidine and leupeptin, to regenerated cellulose functionalized (epoxy-activated) microporous membranes. See pages 5 and 6. Therefore, the specification fails to demonstrate that the inventor(s), at the time the application was filed, had possession of the full breadth of the claimed invention.

Response to Arguments

Applicant's arguments with respect to the rejection of claims 11 and 13-15 under 35 U.S.C. 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, new grounds of rejection are made.

No claims are allowed.
